There is a Leadership Void in the Fire Service

Fire Service Leadership is an important part of today's fire service. So much more is expected out of today's fire service leaders that sometimes tradition bounds them to simple mistakes. Now is the time for today's firefighters to take a larger role in leading their department. Leaders come in formal shapes and sizes and informal shapes and sizes. This class--while helping fire officers--is designed for all fire service personnel. While a person may not currently aspire to be an officer, that feeling may change with time, plus not all officers are leaders. A firefighter may become a leader within the department without ever being an officer. Plus, this class will also teach how subordinates can help their leaders become more effective.

One warning: Egos and rank must be left at the door. There are ideas and concepts held within this class that may shatter some traditional ways of thinking.
